Road,

12th March,

D.C.B.
 2/8

Dear Down Malholm,

This 5yr old boy has a history of rather severe atopic dermatitis and is currently suffering from excoriated plaques on his hands, feet and knees.

He is under the care of Dr Dick at Stirling Royal Infirmary, and his regime of treatments was 1% ichthammol ointment vaseline and also Betnovate RD ointment.

I saw him last week and treated him, again, on gamolenic acid, its having been discontinued,

Practice Code: 25046

and also hydrocort.

His mother is keen that he
seen by a homoeopathic doctor as
she is very concerned about the
amounts of steroids being used to
maintain her son's eczema.

I hope you will have something
to add to this unfortunate boy's
care.

Yours sincerely,

Charles H. Sanderson
GP Truro.

FIRST REVIEW

15/11/11: After powder scratched for 2/7.
And skin looked raised and a bit
red, then settled. Hands + arms <.
Fine in himself. Had flu. Throat
infection + ear infection given antibiotics.
Skin generally OK.
No hydrocortisone. Good moisturiser.
Skin on legs as previously clearing.
Appetite OK but was a bit downy flu.
Good. Sleeping a lot better.

NOTES:

Treated constitutionally with high potency
stat doses from first consultation..
Good general results within a few days of
each high potency treatment.
Intermittent break out of skin with specific
trigger events / exposures.
Consider the possible treatment strategies
for maintenance.
